INSTALLATION  
CRANE

26. September 2022

## BMS HEAVY CRANES AND LIFTRA TAKE TURBINE INSTALLATION TO THE NEXT LEVEL

**BMS Heavy Cranes, the world's leading crane company in the wind turbine industry, and Liftra, known for the industry leading Self-Hoisting Crane technology, have joined forces to launch the ground-breaking LT1500 Turbine Installation Crane.**

The introduction of a revolutionary new climbing crane, based on the certified and proven Liftra Self-Hoisting Crane technology, that continues the 10-year trend of reducing the cost and duration of major corrective maintenance. The LT1500 Turbine Installation Crane offers the possibility of erecting higher turbines faster and at a lower cost, while greatly reducing the environmental footprint compared to traditional crane technologies.

The LT1500 Turbine Installation Crane supports all onshore turbines through fitting a crane interface to the tower sections that allows the crane to climb the tower.

As a first mover, BMS Heavy Cranes has embraced this new crane concept and in cooperation with Liftra is diligently working on introducing the LT1500 Turbine Installation Crane to the wind industry.

Following an extensive testing program, BMS Heavy Cranes will add the LT1500 Turbine Installation Crane to their already vast fleet of installation cranes for deployment to their OEM customers worldwide.

Our major OEM customers are already taking a great deal of interest in this type of crane technology with discussions currently underway for future installation projects utilizing the LT1500 Turbine Installation Crane.

### ABOUT LIFTRA

At Liftra, we design and manufacture custom lifting and transportation solutions for selected turbine model, and have been part of the global wind industry for 20 years.

We strive to develop solutions that are both technically and economically attractive.

Liftra accomplish this by approaching each project with an agile mindset and readiness to conform to the specific needs of the client.
